

KONICA MINOLTA

Display Color Analyzer

CA-410

1

Broad measurement support for today's everevolving displays CA-310 successor with major improvements

4 improvements for display

Accuracy guaranteed from ultra-low to high brightness

With more and more displays becoming HDR (High Dynamic Range), the pressure is mounting for color analyzers to improve their measurement performance at both high and low brightnesses.

By using new sensors and circuitry, the CA-410 realizes an accuracy-guaranteed brightness range 25x wider than its predecessor (compared to the CA-310 when using Normal Probe CA-P427).

This gives users the means to accurately measure and adjust the chromaticity and gamma characteristics of HDR displays across a wide brightness range from ultra-low to high.

Display brightness measurement example

Earlier model display: 0.01 to 500 cd/m²

HDR display: 0.001 to more than 1,000 cd/m²

CA-310 (Using CA-P32 probe) Accuracy guaranteed range for luminance: 0.005 to 1,000 cd/m²

CA-410 (Using CA-P427 probe) Accuracy guaranteed range for luminance: 0.001 to 5,000 cd/m²

Improved chromaticity measurement accuracy

The greater intensity and wider color gamut of newer displays require color analyzers that can measure chromaticity to a higher degree of precision. Thanks to the enhanced accuracy of the XYZ filters, the CA-410 pushes its spectral sensitivity even closer to the color-matching functions of CIE 1931 (compared to the CA-310). Moreover, the accuracy of chromaticity measurements has been further improved by calibrating the analyzer with reference that replicates the optical spectrum of an LED light source for displays. As such, users can more accurately measure and adjust the chromaticity and white balance of displays that have a

wide color gamut.

CA-410 spectral sensitivity vs.

• High Sensitivity Probe CA-VP410's spectral sensitivities are shown above as typical.

CA-310: Based on Konica Minolta's reference LCD
CA-410: Based on Konica Minolta's reference light source

measurement support

Optimized specifications for integration as a sensor

Since the launch of the first model, Konica Minolta's CA series display color analyzers have been incorporated by many customers into automatic measurement systems as color sensors due to their high accuracy.

The CA-410 is optimized for even better integration as a sensor with a motorized zero-point calibration shutter for automatic unmanned support and direct connection between probes and a computer for a more compact installation. At the same time, it maintains compatibility with its predecessor model by including the same basic commands in the CA-SDK2 as were available in the software development kit (SDK) of the previous model and locating the threaded probe installation holes in the same positions as on the predecessor model (excluding Mini Probe CA-MP410).

Wider measurement application support

Continuing to work with long-standing CA-series customers and respond to their needs, we developed the CA-410 to deliver higher reliability for a wider range of measurement targets and applications; when measuring gamma, for example, the CA-410 provides reduced between-range errors, shorter range switching time, and support for low-

Lineup of probes for diverse measurement needs

High Sensitivity Probes

- ① CA-VP410 (Measurement area: ø10 mm)
- ② CA-VP427 (Measurement area: ø27 mm)
- This model is suited for measuring high-end OLED displays across a wide brightness range from ultra-low to high at high speed.

Use for: Measuring, inspecting and adjusting chromaticity and gamma characteristics of OLED displays for TVs and smartphones across a wide brightness range from ultra-low to high

Normal Probes

- ③ CA-P410 (Measurement area: ø10 mm)
- This model is suited for measuring a wide range of displays, and is also compatible with the CA-310.
- * Available also in high-brightness models capable of measurements up to 30,000 cd/m² (CA-P410H: ø10 mm measurement area; CA-P427H: ø27 mm measurement area)

Mini Probe

- ⑤ CA-MP410 (Measurement area: ø10 mm)
- This model is designed to render the same level of performance as the CA-310 but in an even smaller package.

Use for: Applications that require small-sized probes or portability, i.e., color sensor for automatic measurement systems used in small display production processes, calibration of professional monitors and other applications that require space-saving design

* Available also in a high-brightness model capable of measurements up to 30,000 cd/m² (CA-MP410H: ø10 mm measurement area)

Probe dimensions (Units: mm)

Easy-to-operate CA-DP40 data processor

Data processor

Because of the fast pace at which products and technologies evolve, speed is of the essence when it comes to R & D activities in the display industry.

That is why the CA-DP40 data processor takes the "easy-to-operate" feature of the CA-310 to new heights.

With automatic zero-point calibration that allows measurement to start immediately after the power is turned ON, an easy-to-view 7-inch color display multilingual support and a lithium ion battery (sold separately) that makes the unit portable, the CA-DP40 obtains measurement data quickly and reliably, making it convenient for on-the-spot for R & D applications. Moreover, the CA-DP40 can connect to a maximum of 10 probes, which gives users the support they need for multipoint measurements.

Carrying Case CA-A01 (Sold separately)

Software for Color Analyzer included

PC Software for Color Analyzer CA-S40 and Software Development Kit CA-SDK2 give users even wider versatility in terms of applications and set up, by making it possible for probes to be directly connected to the computer measurements. Both CA-S40 and CA-SDK2 come standard with all CA-410 probes and support Windows $^{(\!R\!)}$ 7/10 as well as macOS $^{(\!R\!)}$.

Chromaticity measurement

JEITA flicker measurement

High Sensitivity Probe

[•] Measured with Konica Minolta's specified PC and probe connected directly, using the supplied measurement software.

^{*1:} Measured under Konica Minolta's standard light source (6,500K).

 $[\]hbox{*2: Luminance for monochrome is measured when reading of luminance for white is $100\,\text{cd/m}^2$.}$

^{*3:} Temperature 23°C/ \pm 2°C, relative humidity 40% \pm 10%
*4: In NTSC synchronization mode using USB with one probe

^{*5:} Reading variation within range (compared to reference reading at 23°C, 40% RH): Luminance: ±2% for white; Chromaticity (at 100 cd/m²): ±0.002 for white, ±0.003 for monochrome

Main Specifications of Data Processor CA-DP40

Main Specifications of PC Software CA-S40

<system requirements=""></system>				
	Windows® 7 Professional 32-bit			
	Windows® 7 Professional 64-bit			
	Windows® 10 Pro 32-bit			
OS	Windows® 10 Pro 64-bit			
05	macOS® Sierra			
	•The hardware of the computer system to be used must meet or exceed the greater			
	of the recommended system requirements for the compatible OS being used or the			
	following specifications.			
CPU	Intel® Core™ i series or equivalent			
Memory	4 GB or more			
Hard disk drive	Needs free space of at least 100 MB, and at least 50 MB on system drive where OS is			
rial d disk drive	installed			
Display	Capable of at least 1,280 × 768 dots/ High color, 16-bit			
Others	USB port for installing from flash drive			
Others	USB port (2.0 or higher) for connecting measuring instruments			
<controllable instruments=""></controllable>				
CA-410 Data Processor	CA-DP40			
CA-410 Probes	CA-P427 / P427H / P410 / P410H / MP410 / MP410H / VP427 / VP410			
<languages></languages>				
Display language	English

SAFETY PRECAUTIONS

Osaka, Japan

Wuhan Office

For correct use and for your safety, be sure to read the instruction manual before using the instrument.

 Always connect the instrument to the specified power supply voltage. Improper connection may cause a fire or electric shock.
